# COMP 1010- Summer 2015 (A01) 

## Jim (James) Young

young@cs.umanitoba.ca
jimyoung.ca

## Hello!

James (Jim) Young
young@cs.umanitoba.ca
jimyoung.ca
office hours T / Th: 17:00-18:00
EITC-E2-582
(or by appointment, arrange by email)

Midterm - quick discussion

## Calendar Exercises:

Exercise: set which day of the week the calendar starts on
Exercise: fix the highlighting to be better centered around the number
Exercise: highlight Sundays and Wednesdays on the calendar

## Example: interactive temperature scale

Globals!
S_TOP

S_LEFT
S_WIDTH
S_HEIGHT
HOT
COLD
TEMP_RANGE
Draw outside rectangle

## Example: interactive temperature scale

Tick mark calculations
DEG_PER_TICK

TICKS
TICK_SPACING
TICK_HEIGHT

Draw ticks (for loop!!)

## labels

Calculate and output celcius label at each tick Calculate Fahrenheit:

$$
f=9 / 5 c+32
$$

Output at each tick at bottom of scale

## Mouse interactive..

- Calculate how far along the scale the mouse is. Take the mouse position and subtract the left end of the scale
- Make sure we're not off either end of the scale!!
- Draw the filling using that width

## Mouse reading

Convert the mouse position to percentage,
Then convert to temperature
Put a string out with the reading

## Let's re-visit the == operator

Compares two values and returns a boolean type
$\rightarrow$ Cannot be used to compare Strings
it may look like it works sometimes, but
not what you think

Tells you if they are the same object

## String is a special case

String s1 = "hello.";
String s2 = "hello.";
if ( $s 1==s 2$ ) // not what you think!!
\{
\}

## boolean stringVariable.equals(String)

String chantPartA = "hi";
String chantPartB = "ho";
boolean areEquals = chantPartA.equals(chantPartB); // or, = chantPartB.equals(chantPartA);

## char type

holds a single character
char variablename = 'x';
you specify a single character by using single quotes: 'x'
note: a String is " " and a char is ' ' traditionally, 1 byte in Processing, its 2 bytes (don't memorize)

## what is a single character??

a letter, e.g., 'f'
a number, e.g., '8'
a symbol, e.g., '+'
a space, "‘
etc...

## How Computers stores characters

in the old days, computers only had a small number of characters they could display:

ASCII standard:
this is a table of characters, and each character has a number.

## standard ASCII table:

| ASCII value | Character | Control character | $\begin{aligned} & \text { ASCII } \\ & \text { value } \end{aligned}$ | Character | $\begin{aligned} & \text { ASCII } \\ & \text { value } \end{aligned}$ | Character | $\begin{aligned} & \text { ASCII } \\ & \text { value } \end{aligned}$ | Character |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 000 | (null) | NUL | 032 | (space) | 064 | (a) | 096 |  |
| 001 | - | SOH | 033 | ! | 065 | A | 097 | a |
| 002 | c) | STX | 034 | " | 066 | B | 098 | b |

opyrigh1 1999, JimPrize.Com Copyright 1992, Losding Edgc Computer Froducts, Inc

## why do we number the characters?

## ASCII

 value Character as numbers.even your music and photos!!!
some clever people decided on a standard numbering, so that, e.g., the number 65 is $A, 78$ is $N$, etc.

# How to check the ascii number of a character? 

Force the data into an integer
(advanced, gimmicky, don't study)

## Char and casting

Since the character is simply an integer number underneath, you can convert back and forth to an integer. char -> int is a widening cast because the int has more memory (impicit cast) int->char is a narrowing cast because the char is less capable: requires an explicit cast

## ASCII is limited！！！

| ASCII value | Character | Control character | ASCII value | Character | $\begin{aligned} & \text { ASCII } \\ & \text { value } \end{aligned}$ | Character | $\begin{aligned} & \text { ASCII } \\ & \text { value } \end{aligned}$ | Character |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 000 | （null） | NUL | 032 | （space） | 064 | （a） | 096 |  |
| 001 | $\bigcirc$ | SOH | 033 | ！pace） | 065 | A | 097 | a |
| 002 | 3 | STX | 034 | ＂ | 066 | B | 098 | b |
| 003 | － | ETX | 035 | \＃ | 067 | C | 099 | c |

| 012 | （form feed） | FF | 044 |  | 076 | L | 108 | 1 |
| 013 | （carriage return） | CR | 045 | － | 077 | M | 109 | $\mathrm{m}$ |
| 014 | $\square$ | s | n4f |  | ก78 | N | 110 | n |

only one language at a time：
language－specific，accented letters，etc．
does not handle complex writing systems！
こんにちは！中国語 안녕 하세요
remember those garbled websites？

## Unicode：

ONE standard for all languages
is the reason I can put many languages at once：
こんにちは！中国語 안녕하세요 口íখ
double the memory of ASCII－ note：each character takes 2 bytes of memory．

## String structure

each character has a specified "index" (box)
"sprocket"

## String indices

each box has a designated number the $1^{\text {st }}$ box is box 0
$2^{\text {nd }}$ is box $1 \ldots .$. and so forth Note: OFF BY ONE ERROR!

|  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { char } \\ & 2 \mathrm{~B} \end{aligned}$ | $\begin{array}{\|c\|c\|} \hline \text { char } \\ \hline 2 B \end{array}$ | $\begin{aligned} & \text { char } \\ & 2 \mathrm{C} \end{aligned}$ | $\begin{array}{\|c\|c\|c\|c\|} \hline \text { char } \\ \hline \end{array}$ | $\begin{array}{\|c\|c} \text { char } \\ \text { 2B } \end{array}$ | $\begin{array}{\|c\|c\|} \hline \text { char } \\ \hline \end{array}$ | $\begin{aligned} & \text { char } \\ & 2 \mathrm{~B} \end{aligned}$ | $\begin{array}{\|c\|c\|} \hline \text { char } \\ \hline \end{array}$ |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

String methods!!
Your string variable type has several built-in methods (commands) that you can use.
variableName.method(parameters);

String dogName; dogName = "sprocket";
// dogName.method(parameters); dogName.length(); // takes no parameters

String Length: int variableName.length()

What is the length of this string? note: the index of the last character is string.length() - 1 off by one error

S $\quad$ P $\quad$ R O C K $\quad$ E $\quad$ T

| char <br> 2 B | char <br> 2 B | char <br> 2 B | char <br> 2 B | char <br> 2 B | char <br> 2 B | char <br> 2 B | char <br> 2 B |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

## Get character:

char variableName.charAt(int index)
returns the specific single character at the given index (box \#).
e.g.,:

String dogName = "sprocket"; char secondLetter = dogName.charAt(1);

S $\quad$ P R O C $\quad$ K E T

| $\begin{gathered} \text { char } \\ 2 B \end{gathered}$ | ${ }_{28}$ char | $\begin{gathered} \text { char } \\ 2 B \end{gathered}$ | ${ }_{28}$ | $\begin{array}{\|c} \text { char } \\ 2 \mathrm{~B} \end{array}$ | $\begin{gathered} \text { char } \\ 2 B \end{gathered}$ | $\begin{gathered} \text { char } \\ 2 B \end{gathered}$ | $\begin{gathered} \text { char } \\ 2 B \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 0 | 1 | 2 | 3 | 4 |  |  |  |

## Off-by-one string length error

String s = "SPROCKET";
char lastCharacter = s.charAt(s.length());
char lastCharacter = s.charAt(s.length()-1);
$S \quad P \quad R \quad O \quad C \quad K \quad E \quad T$

|  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { char } \\ & 2 \mathrm{~B} \end{aligned}$ | $\begin{array}{\|c} \text { char } \\ 2 \mathrm{aB} \end{array}$ | $\begin{aligned} & \text { char } \\ & 2 \mathrm{AB} \end{aligned}$ | $\begin{array}{\|cc\|c\|c\|} \hline \text { char } \\ \hline \end{array}$ | $\begin{aligned} & \text { char } \\ & 2 \mathrm{AB} \end{aligned}$ | $\begin{array}{\|cc\|c\|c\|} \hline \text { char } \\ \hline \end{array}$ | $\begin{aligned} & \text { char } \\ & 2 \mathrm{AB} \end{aligned}$ | $\begin{array}{\|cc\|c\|c\|} \hline \text { char } \\ \hline \end{array}$ |
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 |

## Example: put string out one character at a time

Select spacing Off by one errors!

Increase spacing
Animate spacing

## Palindrome tester

Reverse a string
Compare against original
If equal - palindrome!

## How to reverse a string?

Go through string with a for loop
Get each character
Add to a new string in the opposite order
